9. Admin Experience
10. Payment & Revenue
11. Smart Features
12. Full Task List
13. Suggested Improvements

1. What is Computiq Academy?

Computiq Academy is an **online and on-site learning platform** built for the Iraqi market. It allows students to learn skills through courses and structured programs, earn certificates, prove their abilities, and connect with employers — all in one place.

The Vision

Pillar	What It Means
🎓 **Learn**	Students take courses and programs (online or in-person) to build real skills
🏆 **Prove**	Students earn certificates, scores, and verified skills that appear on their profile
💼 **Connect**	HR professionals search the talent pool to find and hire academy graduates
🏛 **Partner**	Universities and organizations track their students and compete in rankings

2. Who Will Use It?

The platform serves **four types of users**, each with their own area and features:

🎓 Student (Default Role)

The main user. Every account starts as a student. Students browse courses, enroll, learn, complete quizzes and coding challenges, earn certificates, and build a professional profile.

💼 HR Professional

Represents a company or hiring manager. HR users post job listings, search the talent pool of academy students, view candidate profiles, and subscribe to plans based on their hiring needs.

🏛 Organization

Represents a university, institute, or training center. Organizations register on the platform, track their students' progress, and see how they rank among other institutions.

🛡 Admin

The academy management team. Admins control all content, users, payments, settings, and platform operations through a dedicated admin panel.

---

3. Platform Sections

Public Pages (Visible to Everyone)

Page	Purpose
Home	Landing page showcasing featured courses, programs, partners, and the academy's value
Courses	Full list of available courses with filters for category, type (online/on-site), and search
Programs	Displayed in a slide-style showcase, especially for on-site programs
Academy Talents	Public-facing talent pool where employers can see top students
HR Page	Landing page explaining the hiring features and plans for HR users
Organizations Page	Landing page for universities and partner institutions
Certification Partners	Section highlighting partner certifications and credentials
Skill Finder Map	Interactive map helping users discover which skills and courses match their goals
About / Contact / FAQ	Standard informational pages

Login & Registration

- Sign up and sign in using **email and password**
- Sign in with **Google** or **GitHub** accounts
- During sign-up, students select their **university or organization** to link their account

---

4. How Roles Work

Role Switching

Inspired by eYouth, the platform uses a **role switching** system. A single user account can hold multiple roles. A clean button in the top navigation lets users switch between roles instantly.

Example: A person is both a student and an HR professional at a company. They can switch between their student dashboard (to learn) and their HR dashboard (to post jobs) without logging out or creating separate accounts.

What Each Role Can Access

Action	Student	HR	Organization	Admin
Browse and search courses/programs	☑	☑	☑	☑
Buy courses or programs	☑	—	—	—
Watch videos and complete content	☑	—	—	☑
Take quizzes and coding challenges	☑	—	—	—
Earn certificates and skills	☑	—	—	—
Comment and rate courses	☑	—	—	—
Post job listings	—	☑	—	☑
Search academy talents	—	☑	—	☑
View detailed student profiles	—	☑	—	☑
View linked students and rankings	—	—	☑	☑
Manage all platform content	—	—	—	☑

5. Courses & Programs

What's the Difference?

	Course	Program
What is it	A single learning unit on one topic	A collection of courses grouped under one goal
Example	"JavaScript Basics"	"Full-Stack Web Development" (contains 6 courses)
Certificate	Course completion certificate	Program completion certificate (from a partner, when applicable)

Online vs. On-Site

The platform clearly separates **online** and **on-site** offerings:

Aspect	Online	On-Site
Delivery	Video lessons accessed from anywhere	In-person classes at a physical location
Payment	Online payment (ZainCash)	Cash only, paid on-site
Enrollment	Instant access after payment	Registration → Admin approval → Attendance
Features	Video player, inline quizzes, coding tasks	Attendance tracking, acceptance flow, video uploads
Display	Listed and tagged as "Online"	Listed and tagged as "On-Site"

Course Detail Page Contents

When a student opens a course page, they should see:

- Title, summary, and what they will learn
- Prerequisites and duration
- Instructor name and bio
- List of lessons or modules
- Included quizzes or coding tasks
- Whether a certificate is available
- Price and Buy/Enroll button
- Online or on-site badge
- Open or closed status
- Comments and ratings from other students

Program Detail Page Contents

When a student opens a program page, they should see:

- Title, summary, and program objective
- What the student will learn by the end
- Target audience and prerequisites
- Full list of included courses
- Instructor or partner information
- Duration and certificate details
- Price and Buy/Enroll button
- Online or on-site badge
- Open or closed status
- Comments and ratings from other students

---

6. Student Experience

Student Dashboard

After logging in, the student sees a personal dashboard showing:

- 📚 **My Courses** — currently enrolled courses with progress bars
- 🎯 **My Programs** — currently enrolled programs with progress tracking
- 📊 **Progress Overview** — overall learning statistics
- ⏰ **Upcoming** — deadlines, quizzes, and assignments coming soon
- 🏅 **Certificates** — earned certificates and badges
- 🔔 **Notifications** — new jobs, course updates, comments, and reminders

Learning Experience

- **Video Player** — watch lessons with progress tracking
- **Inline Quizzes** — multiple choice and true/false questions appear during or after videos
- **Coding Challenges** — for coding courses, students write and run code against test cases with performance checking
- **Attendance** — for on-site courses: attend, absent, and not yet status tracking

Student Profile

The student profile is **LinkedIn-ready** and contains these sections:

Section	What's Included
Basic Info	Full name, profile image, headline, short bio, city, country, phone, email
Education	University, department, degree, start/graduation year, academic status
Skills	Manually added skills + verified skills from courses, programs, and exams
Learning History	Enrolled courses, completed courses, enrolled programs, completed programs, progress
Scores	Total score (online + on-site combined), certificates, badges, verified achievements
Projects	Project title, description, links, GitHub, or other portfolio links
Career	CV upload, preferred role, preferred city, job/internship availability, work preferences
Social Links	LinkedIn, GitHub, portfolio site, and other public links

> **Score System:** Online course scores and on-site course scores are combined into one total score on the profile.

Standalone Exams

Students can take exams **without enrolling in a full course**. If they pass, the skill appears on their profile with a certificate — useful for experienced students who already know a topic and just want proof.

Comments & Ratings

- Students can leave **star ratings** (1–5) and **written comments** on courses and programs
- Rating and commenting is only allowed if the student **purchased** the item (they don't need to finish it first)

Certificates

After completing a course, program, or standalone exam, the student receives a **downloadable certificate** with a unique certificate number.

---

7. HR Experience

What HR Users Can Do

HR professionals represent companies looking to hire academy graduates. Their experience includes:

1. **Post Jobs** — Create job listings visible to academy students
2. **Search Talent** — Browse the talent pool using filters (skills, university, city, score)
3. **View Candidates** — Open full student profiles with skills, certificates, and scores
4. **Manage Plan** — Subscribe to a hiring plan that controls job posting and search limits

HR Profile

The HR profile contains:

Section	Details
Company Info	Company name, logo, industry, size, description
Contact	Work email, phone, website, address, city, contact person name
Hiring Info	Hiring focus, target roles, preferred locations, internship/junior preference
Plan Info	Current plan, plan status, usage, active jobs count, profile views remaining

HR Plans

Plan	Active Jobs	Search Level	Profile Views	Price
🆓 **Starter**	1 per month	Basic	20 per month	Free
📈 **Growth**	5 per month	Advanced	150 per month	$9.99/month
🚀 **Pro**	25 per month	Advanced	1,000 per month	$40/month
🏢 **Enterprise**	Unlimited	Custom	Unlimited	Contact Us

> *These plans are temporary. Final pricing will be decided after competitor analysis and Iraqi market research.*

---

8. Organization Experience

What Organizations Can Do

Organizations (universities, institutes, training centers) can:

1. **Create a Profile** — Register with name, logo, type, city, website, contact info, and partnership status
2. **View Their Students** — See all students linked to the organization and their learning progress
3. **See Rankings** — Compare how their students perform against other universities on the platform

How Students Connect to Organizations

During registration, students **select their university or organization**. This links them to the institution, allowing the organization to track their progress and achievements.

---

9. Admin Experience

The admin panel is a separate management area where the academy team controls everything:

Area	What Admins Manage
Users	View, edit, and manage all user accounts
Courses	Create, edit, publish, and manage courses and lessons
Programs	Create programs, assign courses to programs, manage program settings
Categories	Manage course and program categories
Quizzes	Create and manage quiz questions, options, and passing criteria
Coding Tasks	Create coding problems, test cases, and difficulty settings
Standalone Exams	Create and manage exams available outside of courses
Enrollments	View and manage student enrollments, approve on-site registrations
Payments	View payment history, mark cash payments, manage refunds
Certificates	View and manage issued certificates
Jobs	Oversee HR job postings
HR Plans	Configure plan limits, pricing, and features
Organizations	Manage organization profiles and partnerships
Partners	Manage certification partner logos and information
Settings	System-wide settings and configuration

---

10. Payment & Revenue

Revenue Streams

Source	Model
Online Courses & Programs	One-time purchase → instant access
Standalone Exams	Paid exams for skill verification
HR Plans	Monthly subscriptions (Growth, Pro, Enterprise)
On-Site Courses	Cash collection at the venue

How Online Payment Works

1. Student selects a course or program and clicks **Buy**
2. Redirected to checkout with order summary
3. Pays through **ZainCash** (Iraqi payment gateway)
4. Payment is verified automatically
5. Student gets **instant access** to the content

How On-Site Payment Works

1. Student registers for an on-site course
2. Admin **reviews and approves** the registration
3. Student is notified of acceptance
4. Student pays **cash** at the venue
5. Admin marks the payment as received
6. Student's enrollment becomes active

---

11. Smart Features

🤖 AI Guidance Chatbot

A built-in chatbot helps students decide what to learn. It asks about the student's **goal**, **budget**, and **background**, then recommends the most suitable courses or programs.

🔍 Search & Discovery

- **Category browsing** — students explore through organized categories
- **Filtering** — filter by type (online/on-site), open/closed status, price, category, and more
- **Search** — keyword search across courses and programs

🔔 Retention & Engagement

The platform keeps students coming back through:

- **Progress visibility** — clear progress bars and completion tracking
- **Notifications** — alerts for new jobs, new courses, deadlines, comments, and updates
- **Reminders** — nudges to complete unfinished content
- **Recognition** — features like "Student of the Month" or "Student of the Course" (planned for later)

👥 Community

A simple community layer where students can:

- Create posts related to courses or programs
- Reply to other students' posts
- Discuss learning content with peers

---

12. Full Task List

Core Platform Tasks

#	Task	Priority
1	Build the academy pages (home, courses, programs, talents, HR, organizations)	High
2	Build login and registration (email, Google, GitHub)	High
3	Build role-based access for all 4 roles	High
4	Build role switching (inspired by eYouth)	High
5	Build payment and checkout flow (online + on-site cash)	High
6.1	Build programs slide-style showcase	Medium
6.2	Build certification partner section	Medium
6.3	Build skill finder map	Medium
7	Build content access after payment	High
8	Build search with filtering and categories	Medium
9	Build clear separation between online and on-site	High

Student Tasks

#	Task	Priority
10	Build student dashboard	High
11	Build student learning view centered around programs	High
13	Build course and program detail pages with payment	High
14	Build student profile (LinkedIn-ready with scores)	High
15	Build comments and ratings on courses	Medium
16	Build attendance tracking for on-site courses	Medium
17	Build quizzes inside the learning experience	High
18	Build coding assessments with test cases	High
19	Build standalone exams (exam without a course)	Medium
20	Build certificates and skill proof on profile	Medium
21	Build AI guidance chatbot	Medium
22	Build community basics for students	Low
23	Build retention features (notifications, reminders)	Low
24	Build student recognition features (later phase)	Low

HR Tasks

#	Task	Priority
25	Build HR job posting and student application flow	High
26	Build HR dashboard	High
27	Build talent search and filtering	High
28	Build candidate profile viewing	Medium
29	Build HR plans (Starter, Growth, Pro, Enterprise)	High
30	Build HR profile	Medium

Organization Tasks

#	Task	Priority
31	Build organization registration and profile	Medium
32	Build organization dashboard	Medium
33	Build student-to-organization linking and visibility	Medium

---

13. Suggested Improvements

After reviewing the full project scope, here are recommendations to strengthen the platform:

Critical — Should Be Added Before Launch

1. Instructor Role

> **Current gap:** The document mentions instructors but doesn't define them as a role.

Recommendation: Add a 5th role for **Instructors** with their own dashboard where they can:

- Upload and manage course content (videos, lessons, quizzes)
- View enrolled students and their progress
- See comments and ratings on their courses
- Track revenue from their courses (if using a revenue-share model)

Without this, all content management falls entirely on admins, which won't scale.

2. Refund & Cancellation Policy

> **Current gap:** No mention of what happens if a student wants a refund or cancels enrollment.

Recommendation: Define clear policies:

- Within 24 hours of purchase → full refund
- Before watching more than 20% of content → partial refund
- After 20% → no refund

- Admin-initiated refund for special cases

3. Content Protection

> **Current gap:** No mention of how video content is protected from downloading or sharing.

Recommendation: Implement:

- Signed, temporary video URLs (videos expire and can't be shared)
- Watermarking with student name/email on screen
- Disable right-click and inspect tools on the video player

4. Email Verification & Security

> **Current gap:** No mention of email verification flow or two-factor authentication.

Recommendation:

- Require email verification before full account access
- Add optional two-factor authentication for HR and Admin accounts
- Rate limit login attempts to prevent brute-force attacks

🟢 Important — Should Be Planned for Early Updates

5. Multi-Language Support (Arabic + English)

> **Current gap:** No mention of language support.

Recommendation: The Iraqi market requires **Arabic RTL support** at minimum. The platform should support:

- Arabic and English content
- Right-to-left layout switching
- Bilingual course content (or at least titles and descriptions)

6. Mobile Responsiveness & Future App

> **Current gap:** No mention of mobile experience.

Recommendation:

- Ensure the website is fully responsive from day one
- Plan for a future mobile app (or at least a Progressive Web App) — students are more likely to watch content on phones in Iraq
- The video player must work seamlessly on mobile

7. Instructor Revenue Sharing

> **Current gap:** No mention of how instructors are compensated.

Recommendation: If external instructors contribute courses, define:

- Revenue split ratio (e.g., 70% instructor / 30% platform)
- Payment schedule (monthly payouts)
- Performance bonuses based on enrollment or ratings

8. Course Reviews & Quality Control

> **Current gap:** Anyone who buys can comment, but no quality review before publishing.

Recommendation:

- Add an admin review step before courses go live
- Allow students to report inappropriate content
- Add a "verified quality" badge for admin-reviewed courses

9. Analytics Dashboard for Admin

> **Current gap:** The admin panel is mentioned but analytics aren't detailed.

Recommendation: Add admin dashboards showing:

- Revenue trends (daily, weekly, monthly)
- Most popular courses and programs
- Student enrollment rates and completion rates
- Drop-off points (where students stop watching)
- HR plan conversion rates
- Top-performing universities

10. Coupon & Discount System

> **Current gap:** No mention of promotions or discounts.

Recommendation: Add:

- Coupon codes for percentage or fixed discounts
- Bulk purchase discounts for organizations
- Seasonal promotions (e.g., Ramadan special, back-to-school)
- Referral rewards (students invite friends for discounts)

🟢 Nice to Have — For Future Phases

11. Learning Paths

> Instead of just courses and programs, offer curated learning paths like "Become a Frontend Developer" that guide students through multiple programs in sequence.

12. Gamification System

> Add experience points (XP), levels, and leaderboards to make learning more engaging. Students earn XP from completing lessons, quizzes, coding tasks, and exams.

13. Mentorship Feature

> Allow students to request short mentoring sessions with instructors or industry professionals for career guidance.

14. Organization-Sponsored Enrollments

> Let organizations pay for bulk enrollments so universities can sponsor their students' access to specific courses or programs.

15. Offline Content Access

> Allow students to download course content for offline viewing (with DRM protection), especially important for areas with unstable internet in Iraq.

16. Advanced Code Editor

> Instead of basic code submission, offer a full browser-based IDE with syntax highlighting, auto-completion, and terminal access for a premium coding experience.

17. Job Application Tracking for Students

> Give students a dashboard showing their job applications, status updates (viewed, shortlisted, rejected), and interview scheduling.

18. Partnership Portal for Certification Bodies

> Allow certification partners to log in, see how many students completed their certified programs, and manage certificate issuance.

19. Waitlist Feature for On-Site Courses

> When an on-site course is full, allow students to join a waitlist and get notified automatically when a spot opens.

20. Student Testimonial Collection

> After completing a course or program, prompt students to leave a short video or text testimonial that can be featured on the homepage.

Summary of Improvement Priorities

Priority	Count	Items
🔴 **Critical (Before Launch)**	4	Instructor role, Refund policy, Content protection, Security
🟡 **Important (Early Updates)**	6	Arabic/RTL, Mobile, Revenue sharing, Quality control, Analytics, Discounts

Priority	Count	Items
⚪ **Nice to Have (Future)**	10	Learning paths, Gamification, Mentorship, Sponsorships, Offline, IDE, Job tracking, Partner portal, Waitlist, Testimonials

> **This document is the non-technical companion to PROJECT_DESIGN.md**
> **Last updated:** March 17, 2026
> **Project:** Computiq Academy
